

Now that your database is perfectly clean, completely unbroken, and housing a flawless record for Dr. R. Sethuraman, here are 10 highly contextual semantic queries you can use to test your system.

These are specifically designed to target the unique milestones, text book authorships, and research profiles found in his data, while testing how well the vector space compares them against your other candidates:

Focus: Textbooks & Academic Outreach

1. "Find a computer science educator who has authored or served as a domain expert for state government textbooks"
2. "Show me faculty profiles with a strong history of writing educational material for high school or higher secondary students"

Focus: International Exposure & Exchange

3. "Are there any candidates who have participated in a faculty exchange program or served as a visiting professor in South America?"
4. "Show me researchers with international travel credentials specifically involving the University of Mendoza"

Focus: Patents & Technical Innovations

5. "Looking for an artificial intelligence specialist who holds patents for emergency rescue systems or IoT devices"
6. "Find engineering faculty who have designed a facial recognition and remote alert system"

Focus: Broad Domain & Enterprise Architecture

7. "Candidates with a balanced background between corporate software engineering at major MNCs and university teaching"
8. "Show me computer science faculty with deep expertise in block-chain, AR-VR, and big data technologies"

Focus: High-Impact Metrics & Stability

9. "Find highly stable researchers with an h-index of 5 or more and over 20 published papers"
10. "Show me faculty profiles with a track record of guiding post-graduate students and acting as consultancy project mentors"

What to Watch For While Testing:

Since your system threshold is now safely adjusted to **0.10** (10%), you will see a beautifully ranked list of all your candidates for every query. For queries like #3 or #6, watch how Dr. R. Sethuraman's profile dynamically dominates the top spot with the highest match confidence score, while unrelated candidates gracefully drop to the bottom with lower percentages!
