

Here are 10 highly effective, natural language queries tailored for your **Semantic Talent Search** portal.

Since semantic search looks for the *meaning* and *context* of a resume rather than just strict keyword matching, these are designed to test different aspects of your candidates' profiles (specialization, research depth, administrative experience, and institutional fit):

Focus: Research Depth & Metrics

1. **"Candidates with high publication counts and strong citation metrics in reputable journals"**

(Tests if the vector math correctly surfaces candidates with high h-index and citation values.)

2. **"Researchers who have successfully secured large institutional grants or patents"**

(Targets candidates with funding and innovation records.)

Focus: Technical & Domain Specialization

3. **"Computer science experts specializing in machine learning, artificial intelligence, or data science"**

(Tests how well the system matches core computer science branches.)

4. **"Faculty with practical experience or specialization in cloud computing and distributed networks"**

(Looks for specific infrastructure and system engineering backgrounds.)

Focus: Teaching Experience & Background

5. **"Seasoned educators with over a decade of university-level teaching experience"**

(Matches structural experience fields implicitly through the evaluation reports.)

6. **"Younger faculty or early-career researchers with high growth potential in engineering disciplines"**

(Tests how well the vector space handles nuanced descriptions like "early-career" vs "seasoned".)

Focus: Leadership & Administrative Capability

7. **"Professors who have held leadership positions like Head of Department or administrative roles"**

(Targets administrative arrays and executive organizational exposure.)

8. **"Candidates with a balanced background in both industrial engineering projects and academic research"**

(Looks for cross-functional industry vs. teaching experience.)

Focus: General Institution Alignment & Verdicts

9. **"Show me the most highly qualified candidates recommended for immediate interviews"**

(Looks at the semantic tone of the final evaluation reports written by your Interview

Coordination Agent.)

10. **"Faculty profiles matching institutional requirements for a senior computer science position"**

(Tests a broad, holistic institutional profile match.)

 Pro-Tip for Testing:

Now that you have your **Upsert** logic locked down, upload all 5 of your candidates to the clean table so they each get a fresh vector signature. Once they are in, paste these queries into your search tab—you'll get a great look at how beautifully the cosine similarity ranking organizes them based on your exact search intent!
